**Q1. PROPOSAL DESCRIPTION**

Provide a brief abstract of the Proposal. Please note if the Proposal will facilitate or support the participation of DAC's in the IRWM planning effort.

SAWPA proposes the development of a new model in integrated regional water management planning that raises the bar so that all IRWM Plan Standards

are met, all DWR IRWM program preferences are addressed, and our vision for the SAWPA IRWM Region is achieved. Expanding upon our current IRWM Plan called the "One Water One Watershed" Plan to be adopted in December of 2010, the proposed new integrated water management plan for the Santa Ana Region proposes a system-wide approach that creates a new template for collaboration and water management. Rather than focusing on traditional water supply reliability approaches which rely on continued imported water deliveries to meet growing water demands in the region, new approaches and planning will be implemented that lead first with a water demand reduction strategy, address the need for a fully functional watershed hydrology, meet water quality requirements and assures a reliable water supply that effectively deals with growing crises of climate change, imported water cutbacks and continued drought conditions. The emphasis of this planning model is that all sectors of our community (water suppliers, water consumers, stormwater managers, parks and recreation providers, environmental stewards, developers, etc.) would be encouraged to adopt a new water ethic that focuses on living within our means and living in the environment that nature has given us. Further, expanded outreach will be conducted to reach all stakeholders including Disadvantaged, Environmental Justice and Native American Tribal communities to assist their needs for safe and clean water supply. Collaboration at this level will result in more cost effective, multi-beneficial and multi-jurisdictional projects that address water resource needs and environmental impacts of the SAWPA IRWM region.
